NEED TO KNOW

Your guide to FECO

LAKI IS A FULLY EXTRACTED CANNABIS OIL. THIS MEANS THAT ALL CANNABANOIDS ARE EXTRACTED FROM THE CANNABIS PLANT.

Endocannabinoid system

The EDC(endocannabinoid system), is made up of tiny molecules over your entire body. Your body has ecocannabinoids but your body does not produce cannabanooids bt itself, the only way the body produce cannabinoids is in breastmilk.

Th EDC has 2 main receptors CB1 and CB2 receptors. CB 1 receptors most commonly found in the brain and nervous system. CB2 receptors found in organs, immune system and cells, as well as in the bones.

Cannabinoids found in cannabis plants such as CBD and THC communicate to these receptors and when something is wrong in the EDC these receptors send out signals, the cannabinoids then binds to the signal targeting where ever there was a problem.

Carrier oils and binding

In order for the body to absorb and make use of the FECO a carrier oil is needed, the FECO gets extracted from the plant via heat and agitation. The oil then gets inserted into the carrier oil. In between the spaces of the carrier oil's molecules, the FECO gets inserted until, the carrier oil has no space left in between the molecules.. But one important element is still needed, a binding agent. A binding agent is used to bind the FECO and the carrier oil together, otherwise the molecules of the two just floats around and cannot be absorbed into the body, making it impossible to respond to receptors. The binding agent found in LAKI oils are Soy.

LAKI has a option of 2 carrier oils namely *Organic Coconut oil* and *MCT oil*.

The main difference between the two is, the MCT has more space between its molecules, with that there is space to insert even more FECO before the MCT's capacity has reached it's maximum. Thus MCT works for a longer period of time.

MCT oils are more expensive but very useful especially for chronic pain like in arthritis.

What is MCT Oil?

MCT oil is a supplement made from a type of fat called medium-chain triglycerides. MCT molecules are smaller than those in most of the fats you eat (long-chain triglycerides [LCT]). This makes them easier to digest. You can absorb MCT in your bloodstream quickly. This turns it into energy you can use.

MCT oil is usually made from coconut or palm kernel oil. Both have MCT in them. You can buy 100% MCT oil or a mixture of MCT and LCT. The way people get MCT oil from coconut or palm kernel oil is through a process called fractionation. This separates the MCT from the original oil and concentrates it.

Usually, people use MCT for help with: *Problems taking nutrients, weight loss, appetite control, extra energy for exercise & inflammation.*

Ratios and dosage

AM THC5:20CBD

PM THC1:1CBD

GB THC20:1CBD

Kidsoil THC0.8:21CBD

Furkids THC0.8:21CBD

All clients to start on 5 drops, and move up every 2nd day until desired effect is reached. Ideal dosage is 20drops/1ml per oil per day.

Oils are administered under the tongue and held there for 60sec before swallowing, but can be given in food, drinks or via the navel.

Coconut oil carrier oils congeal in cold weather, bottle to be placed in hot water until contents turn liquid, shaken and then used.

Important information

Oil are safe to use for any condition, and with any medication. In the case of client using blood thinners it is advised to do so under supervision of a Doctor, as FECO already promotes blood circulation, in conjunction with medication blood can become too thin. Also in breast cancer and treatment it is advised to check with the Doctor as a certain chemo therapy does not work with the FECO.

Prices

Coconut carrier oils

15ml R200

30ml R395

Combo AM and PM 30ml R750

MCT oils

15ml R245

30ml R490

Combo AM and PM 30ml R880

AM

AM oil is made from Sativa Medical Strain. It offers upliftment, cerebral enhancing, creativity & productivity.

Sativa is known for it's "mind high".

The benefits include anti-anxiety, anti-depressant, treats chronic pain, increases focus, creativity and serotonin legvels, appetite & craving control.

PM

PM oil is made from Indica Medical Strain.
THC crushes pain with a tidal wave of full body euphoria & physical relieve.

Save it for peaceful nights and restful days.
Indica is known for its "body high".

The benefits include mental & body relaxation, decrease nausea, decrease acute pain, increase dopamine and many other healing properties.

GB

GB oil is very high in THC.

One of our BEST oils to use topically for any skin irritation, infections, burns, eczema, psoriasis, severe muscle pain, headache, piles and more.

TOPICALLY - safe to use on children, teens and furbabies.

INTERNALLY - recommended for adults only.

KIDS

Kids oil is made from a Hybrid Strain.
Very low in THC and high in CBD because kids should live a fully aware, but calm life.
Can boost immune system.

Benefits include assisting children suffering from ADHD, Autism, Epilepsy, Anxiety and Sensory Processing Disorders, common ailments, to boost immune system and many more.

FUR KIDS

Very low in THC and high in CBD because our furry friends also deserve the best care. Can boost immune system and can assist anxious pets to remain calmer during fireworks.

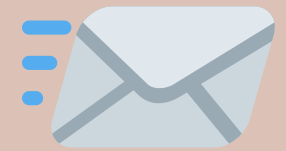

Benefits include assisting animals with seizures, nausea, stress, anxiety, arthritis, pain, symptoms of cancer, gastrointestinal issues, boost immune system and many more.
